MESSAGE

Attached is a memo and itinerary for a trip to view some interesting treatment technology that ASTI will be testing for perchlorate removal. Please let me know ASAP if you want to attend. Mike

MEMORANDUM

March 3, 1998

To: Members of Perchlorate Technical Sub-committee

From: Michael J. McGuire

Subject: Visit to Advanced Separation Technologies Full-Scale Installation for Nitrate Removal in Campo, California

After the Technical Sub-committee meeting on March 12, I have made arrangements for us to visit the Advanced Separation Technologies (AST) full-scale installation for nitrate removal for anyone who is interested. The bad news is that Campo, California is on the Mexican border about 40 miles east of San Diego.

According to my map, the trip would entail about 170 driving miles and will take between three and four hours depending on traffic. I have attached a draft itinerary for your information. Please fill out the reservation information below and fax this back to me as soon as possible at 310-451-7571. We need to make arrangements to rent the proper number of vans for the trip, so we need to know who wants to join us.

Given the long distances involved, we decided against visiting the AST facility in Moreno Valley that is not operational. We can visit that location another time.

Michael J. McGuire, Ph.D.

Name: _____ Company: _____

Telephone: _____

_____ Yes, I plan to attend. I will be bringing _____ additional people with me.

_____ No, I will not attend the field trip.
